

WALID KAMBAGHA

Data & AI Engineer | Data Engineering · Machine Learning · Software Development

Los Angeles, CA • Open to remote, hybrid, or relocation • (904) 846-1719 • waleed92@live.com
linkedin.com/in/walidaak • walidk.netlify.app

SELECTED IMPACT

- **Built two production data platforms from zero** — ingestion, orchestration, lakehouse, warehouse, and the AI and BI layers on top as the first data hire at both organizations.
- **Shipped GenAI to production, not to a demo** — an agent layer handling 500+ concurrent client inquiries and document intelligence over thousands of legal files, both running daily.
- **Cut client acquisition cost 35%** with predictive marketing models, and lifted lead conversion 28% through data-driven audience segmentation.
- **Automated away 35+ hours of manual reporting per month** and caught \$150K+ in processing errors with validation pipelines inside a regulated financial environment.

TECHNICAL SKILLS

Data Engineering: PySpark, Airflow, Dagster, dbt, Kafka, Medallion Lakehouse, ETL/ELT, Data Modeling, Data Warehousing, Data Quality and Governance

ML & AI: PyTorch, YOLO Computer Vision, GenAI Agents, Document Intelligence, Model Evaluation, MLOps, Predictive Modeling

Software Dev: Python, C#/.NET, TypeScript/JavaScript, FastAPI, Next.js, Dart/Flutter, REST APIs, Microservices, Git, Agile/Scrum

Cloud & DevOps: AWS, Azure, Docker, Kubernetes, CI/CD (Azure DevOps, GitHub Actions), Linux

Databases & BI: PostgreSQL, SQL Server, Oracle, SQL & T-SQL, Query Optimization; Power BI, Tableau, Streamlit

EXPERIENCE

Data & AI Engineer — Law Offices of Jacob Emrani, Los Angeles, CA Mar 2026 – Present

- Own the firm's end-to-end data platform, integrating operational systems into a single source of truth that powers real-time analytics, executive dashboards, and AI applications across every department.
- Built an AI Case Summary Assistant turning thousands of legal documents into context-aware case summaries, and an AI intake dialer automating client engagement, lead qualification, callback recovery, and human handoff.
- Set the data quality standards, validation gates, and KPI reporting the platform is measured against, now the basis for staffing, capacity planning, and executive decisions.

Data Engineer — Law Offices of Jacob Emrani, Los Angeles, CA Dec 2025 – Feb 2026

- Joined as the first dedicated data practitioner and built the infrastructure from scratch: PySpark, Dagster, dbt, and Kafka pipelines processing 15K+ daily records across two CRMs, with 5+ external APIs integrated via FastAPI.
- Architected a medallion lakehouse on AWS S3 and RDS unifying operations data, enabling speed-to-lead and call center analytics that replaced manual reporting across the organization.
- Trained and deployed a computer vision model at 92% accuracy automating case intake and severity triage; delivered Power BI and Streamlit dashboards for non-technical leadership.

Data Analyst — Upendo Kwanza (Nonprofit), Jacksonville, FL Jan 2025 – Dec 2025

- Engineered automated Python/SQL ETL over 10K+ student records across three programs, cutting dashboard refresh from 4 hours to 45 minutes and eliminating the manual reporting cycle entirely.
- Built a Next.js/FastAPI analytics portal for 200+ staff, identifying at-risk students 50% faster; added data quality checks catching 95% of anomalies before reporting.

IT Analyst / Programmer (Internship) — Community First Credit Union, Jacksonville, FL Jun 2024 – Oct 2024

- Built .NET applications processing 5,000+ daily loan transactions at 99.8% accuracy, improving approval speed 30% in a regulated financial environment.
- Automated 12 recurring SQL reports and deployed Power Automate workflows across three business units, removing 25 hours per week of manual extraction.

Graduate Research Assistant — University of North Florida, Jacksonville, FL Aug 2023 – Dec 2024

- On a \$3M multi-institution transportation program, built PySpark/Airflow pipelines ingesting 250+ GB from 5 sites into a PostgreSQL warehouse serving 50+ concurrent queries.
- Developed YOLO computer vision models over 100K+ traffic images informing municipal planning, and an automated ML evaluation framework that cut experiment cycles from 8 hours to 90 minutes.

EDUCATION

M.Sc. Computing & Information Sciences (Data Science), University of North Florida — Aug 2023 to Dec 2024 • 4.0 GPA

B.Sc. Computer Science, The Institute of Finance Management — Oct 2012 to Nov 2015

CERTIFICATIONS & PUBLICATIONS

Oracle 2025 Certified Foundations Associate — Cloud Infrastructure, Data Platform, and Cloud Infrastructure AI • AWS Educate — Machine Learning Foundations

Publications: YOLOv8/v9/v10 improvements in traffic analysis • Smart building features impacting fire, electrical, and life safety
